Risk Profile

Risk	Low	Low-Mod	Mod	Mod-High	High
Term	1-3 years	3+ years	3-5 years	5 years	7+ years

Moderate to high risk

This portfolio holds more equity exposure than a medium-risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium-risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium-risk portfolio, but less than a high-risk portfolio and the expected potential long-term investment returns could therefore be higher than a medium-risk portfolio. Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks. The portfolio is exposed to default and interest rate risks. Therefore, it is suitable for medium- to long-term investment horizons.
